## **SPECIAL PROVISIONS**

(These Special Provisions are to be used in conjunction with the City Standard Specifications and Standard Details, and the State Standard Specifications and Standard Plans)

All work shall be constructed in accordance with the City of Pleasanton Standard Specifications and Details dated November 2016, and as augmented by these Special Provisions. The Sections noted are those in the Standard Specifications except for the new Section(s) added. Where conflict exists between these documents and existing conditions, request clarification from the Project Engineer.

### **SECTION 1. GENERAL**

#### 1-18 Working Hours

##### Add:

The contractor shall plan and complete all of the work along Main Street, between Amador High School and Bernal Avenue, by May 4, 2018, in conformance with Section 15-03L, "Sequence of Work", of this special provisions. This work phasing shall be reflected on the proposed schedule of work as part of the project submittal and subject to review by the Engineer.

It is our intent to work closely with nearby businesses to minimize the impact to their daily operations. If the contractor is notified that their work is impacting businesses, the contractor should immediately consult with the Engineer to adjust the work schedule in order to minimize impacts to nearby businesses operations.

#### 1-34 Recycle Water

The City of Pleasanton encourages the use of recycled water for all applicable construction activities that would typically use potable water meters, including but not limited to: dust control, milling machines, construction water trucks, water buffalo and street sweeping. Recycled water is available for purchase from the Dublin San Ramon Services District (DSRSD) and the City of Pleasanton. The DSRSD recycled water fill station is located at 7399 Johnson Drive in Pleasanton. Before the first water pickup, the customer must schedule an appointment with an Environmental Compliance Inspector to apply for a Water Reuse Permit, pay any applicable fees, and be trained in mandatory procedures for using the fill station. For further details see [http://www.dsrds.com/doing\\_business\\_with\\_dsrds/recycledwaterhydrants.html](http://www.dsrds.com/doing_business_with_dsrds/recycledwaterhydrants.html)

Another option for the contractor is to secure a recycled water meter from the City's OSD at 3333 Busch Road, by providing a monetary refundable deposit for the meter. This is at the contractor's discretion and shall be discussed at the preconstruction meeting.

The contractor is to provide a pedestrian/ADA access plan for various construction phases. The site-specific pedestrian circulation plans are typically requested at high pedestrian accumulation areas such as near schools, businesses, etc., at the discretion of the Engineer. No demolition work for pedestrian access is to be initiated until a pedestrian access plan is approved and all detour measures are in place and operational.

A minimum of 11-foot wide travel lanes in all directions shall be maintained at all times during construction.

- Area 4
- Area 7
- Area 6
- Area 1
- Remaining Areas

Concrete shall be placed and completed within four (4) working days from the day demolition work begins at each location unless otherwise directed by the Engineer.

A penalty of \$250 per calendar day shall be assessed against the contractor for each repair location after the above-mentioned period has elapsed. The contractor shall schedule their work accordingly.

### 15-03M Special Instructions/Considerations

The project plans only show schematic drawings of the proposed access ramps. The plans may also show an access ramp centerline being adjusted to fit the current situation with an approximate adjustment value. Not all of the existing utility boxes are shown on the plans, however, it is anticipated that these utility boxes shown or not shown may need adjustment to fit the proposed ramp.

Some of the ramps that are located at the intersection of sloping streets (typically anything greater than 5%) will generally require enlargement of the side areas of the ramp or extension of the ramp “wing” to ensure meeting ADA and City Standards. This longer wing requirement typically happens only on one side of the ramp, however, it can occasionally also happen on both sides of the ramp, depending on the actual terrain and location of the ramp. At these locations, the final grades will be confirmed and/or provided by the engineer during construction and shall be considered by the contractor when submitting their bids. The City shall limit the wing length on each side of the ramp to a maximum of 15 feet, plus the additional length to the nearest control/score joint. The enlargement or extension of ramp wings (to the above mentioned limit) typically only happens at sloped streets and shall be considered part of the limit of work for the ramp; no separate payment shall be allowed.

Commercial driveways, usually more than 18 feet wide, shall remain open at all times and will require phased construction. Contractor shall submit a proposal subject to review by the Engineer.

The contractor is made aware that the existing concrete curb and gutter or concrete valley gutter proposed for removal and replacement generally have water ponding issues. It is therefore important that the contractor, prior to the removal of the concrete as called out on the plans, complete the field verification by using a leveling instrument of their choice, that there shall be a positive flow achieved with the proposed removal and replacement of the existing concrete curb and gutter and/or the concrete valley gutter.

Any discrepancies between the field verification and the proposed work as identified on the plans shall be brought to the attention of the Engineer. The objective is to remove the low points and high points that causes water ponding, however, it is also necessary and important to make sure that ponding is not just transferred or shifted to an adjacent area. The only final product meeting this positive flow verification requirement shall be considered for payment.

It is understood that field conditions may necessitate that the curb reveal height or curb face is adjusted between 4 and 10 inches per the direction of the Engineer. It is also understood that the type or class of access ramp may be changed or revised in the field as deemed appropriate by the Engineer.

At some locations, the existing ADA ramp may already conform to the latest ADA requirement pertaining to slopes and minimum widths, etc., except for missing truncated domes and presence of the concrete lip. At such location(s) shown on the plans and/or as field directed by the Engineer, the contractor shall install surface-applied truncated domes per the manufacturer's recommendation and grind the concrete lip flush with the flowline as approved by the Engineer.

At some locations, the Contractor shall coordinate construction of the access ramp with the fronting property owners due to the removal of existing decorative stones, lawns, hedges, bushes, etc., that may interfere with the construction of the access ramps. If needed, work at such location shall also include tying in on the existing irrigation system, modifying existing irrigation system, installing new irrigation system and may also include the installation of a new lawn, new landscape, new concrete surfacing, or similar material matching existing material in order to cover areas beyond the limit of the access ramps.

Where existing asphalt concrete roadway is shown to be removed in conjunction with the construction of pedestrian ramp, gutter, and driveway, the asphalt concrete surfacing outline for the AC saw cut shall be measured 12 inches from and along the lip of gutter and shall be saw cut to a minimum depth of 3 inches and maximum depth of 6 inches with a power driven saw before removing the asphalt concrete surface. These areas shall be excavated to a minimum depth of 6 inches and replaced with full depth AC.

Per direction from the Engineer, some locations may require the Contractor to remove and replace concrete curb and gutter that includes angle bars supporting the curb inlets. These locations may also involve reinforcements on the gutter pan within the pay limit width of the drain inlet per City Standard Detail 201.

#### 15-04 Measurement

##### Add:

Curb through drains shall not be a measured item.

Sewer lateral stamps, water valve markings, address markings and colored curb markings shall not be a measured item.

Coordination work with property owners, clearing and grubbing of hedges, lawns and decorative stones including tying in on existing irrigation system, modifying existing irrigation system, installing new irrigation system and the installation of a new lawn, landscape or new concrete surfacing shall not be a measured item.

Adjustments of curb reveal height or curb face shall not be a measured item.

Saw cutting of concrete and asphalt concrete for the construction of curb and gutter, driveway and access ramps shall not be a measured item.

All work associated with verifying and checking for positive drainage flow for curb and gutter construction is not a measured item of work and payment shall be considered as included in the various contract items of work requiring such removal and replacement and no separate payment shall be allowed.

Asphalt concrete used in conjunction with the construction of curb and gutter, driveway, access ramps shall not be a measured item.

Concrete curb and gutter along the construction limits of an access ramp shall not be a measured item. This shall be considered part of the access ramp construction.

Concrete curb and gutter with rebar and angle bars, valley and rolled curbs shall be measured as regular concrete curb and gutter.

At locations where the concrete/decorative materials between the back of curb and sidewalk are required to be removed for the installation of the access ramps, these areas are to be considered as included in the access ramp construction and shall not be measured.

Access ramp construction with 15-foot wings plus the concrete to the nearest score joint(s) shall be measured as a complete unit and shall be considered part of the access ramp construction. Additional concrete sidewalk removed as directed by the Engineer that is beyond the score joint(s) mentioned above shall be measured as part of sidewalk construction.

#### 15-05 Payment

##### Add:

Full compensation for furnishing all labor, materials, tools, equipment, and incidentals and for doing all the work involved in the construction of access ramp, regardless of the type or class of ramp being constructed, including but not limited to the removal and disposal of hedges, lawns and decorative rocks, tying in on existing irrigation systems, adjusting existing irrigation system, installing new irrigation system, and the installation of new lawn, landscape and new concrete surfacing, coordinating with fronting property owners, curb re-painting if needed, shifting the centerline of the new ramp, adjusting and coordinating the relocation of utility boxes, measurement of area for proper drainage, potential enlargement at some locations of the side areas or "wing" of an access ramp construction to the nearest concrete joint/score line, etc., shall all be considered included

in the various contract items of work and no additional compensation shall be allowed therefore.

## **SECTION 16. STREET NAME AND TRAFFIC SIGNS**

### **16-04 Measurement**

#### **Revise:**

New street name sign and/or new traffic sign shall be measured based on the completed number of pole(s) installed. One pole with two or more sign plates shall be measured as one complete unit. Pedestrian barricade with multiple sign plates shall be measured as one complete unit.

The relocation of existing street name signs and/or traffic signs with poles that are in conflict with the construction of any concrete work including supplying new posts if needed and adding additional signs, shall not be a measured item.

### **16-05 Payment**

#### **Revise:**

The contract price for new street name sign and/or new traffic sign shall include full compensation for providing and installing new street name and new traffic sign plates, reflective sheeting, lettering, posts, and mounting, complete in place.

For locations requiring the relocation of existing street name signs and traffic signs that is in conflict with the work, including supplying new post if needed and signs, the pole(s) shall be relocated as directed by the Engineer and payment shall be considered included in the various items of work requiring such relocation and no separate payment shall be allowed therefore.

## **SECTION 23. MISCELLANEOUS**

### **23-01 E Good Neighbor Letter and/or Door Knocker**

Attached and made part of these special provisions is a sample of a "Good Neighbor Letter," informing the public of upcoming construction activity. A minimum of two letters are required, with the last letter distributed a minimum of 48 hours before work and within a 250-foot radius of the upcoming work location. The contractor is required to submit the draft letters to the City for review and approval prior to the start of any work.

Similarly, a door knocker can also be used in addition to a good neighbor letter at the discretion of the Engineer. A door knocker shall be distributed a minimum of 48 hours in advance of an upcoming work and shall be distributed within 250 feet on either side of a work location. The contractor is required to submit a draft of the door knocker to the City for review and approval prior to their distribution and start of any work.

These letters and door knockers are required and are in addition to the "No Parking" signs required under section "2-01 E Traffic Control Restrictions." The letters and door knockers are to be distributed to all entities, businesses and residents that are directly impacted when access to their property may be impeded, and may also include other areas affected which is not restricted to the project's limit of work.
